September 7, 2026

Raisa Ciobanu
Chief Financial Officer
Goodwill South Florida
2121 NW 21st St
Miami, FL 33142-7317

Dear Raisa,

Forty Goodwill affiliates break out the same operating supply line on their own Form 990. Thirty-nine of them spend a smaller share of revenue on it than Goodwill South Florida does — and the affiliate median, 2.44%, is the same as the median across all nonprofits. Running the identical donated-goods model does not move that ratio.

We prepared the enclosed Executive Opportunity Brief before contacting you, from public filings only. It tests the two explanations that would settle the question from outside — scale and state — and both fail: the two largest affiliates in the comparison are larger than you and spend under a tenth as much.

It also reads your filing a second way. Part VII Section B names five of your suppliers, and those same suppliers are named in other organisations' returns with the amounts they were paid. Two of your five appear often enough to place.

We are not concluding that anyone is overpaying. Every explanation we can test from public data has failed, and the ones that remain — accounting treatment, purchasing, or both — are in your ledger rather than ours. That is the whole of the question.

Would you give us ninety minutes, with whoever owns the general ledger, to establish which it is?

You would leave with a written read of where your position is explained by treatment and where it is not, whether or not you engage ERA. Nothing changes without your approval, incumbent suppliers frequently remain, and if we create no verified recovery there is no fee.

Best regards,

John Wylie

value through insight™

We did not compare you to nonprofits.

Most outside analysis measures a Goodwill against charities in general. That comparison is easy to make and easy to dismiss, because a donated-goods retailer does not buy like a charity. So we did not make it.

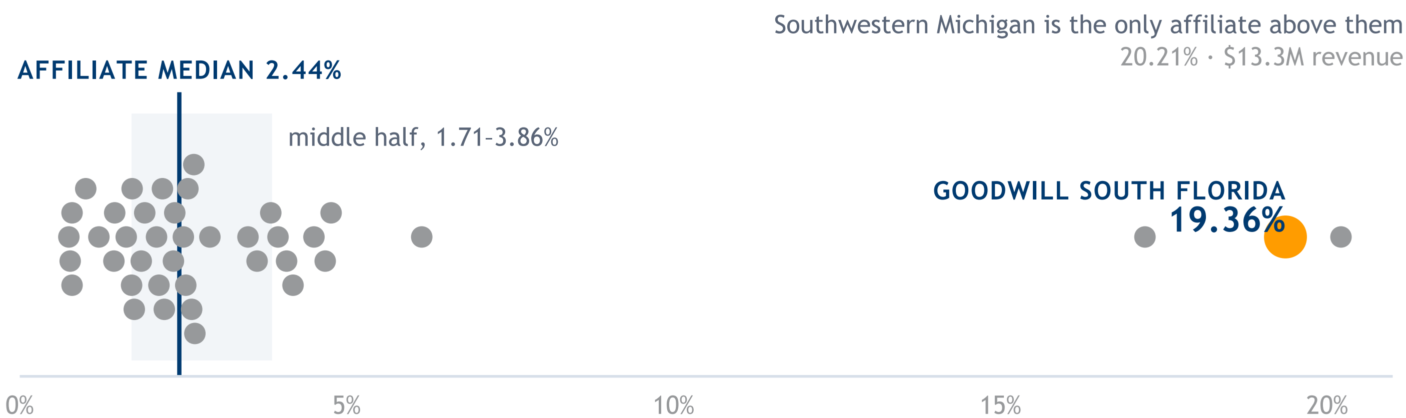
> We compared you to **forty Goodwill affiliates that break out the same operating supply line on their own Form 990.** Same model. Same donated-goods retail economics. Same line on the same return.
>
> Ninety-one affiliates are in the public book, eighty-eight buildable, $5.72 billion of combined revenue across thirty-seven states. Forty of them separate this line.

What follows is that comparison, and a second one built from what your own named suppliers charge other organisations. Two independent readings of public filings. They point at the same three questions.

FILED Form 990 Part IX, FY2024 · **COHORT** 40 Goodwill affiliates, queried 2026-09-07 · **PUBLIC RECORD** everything in this Brief is drawn from filed returns.

Forty Goodwill affiliates break out this line.
Thirty-nine spend less than you.

Operating supply is **19.36% of your total revenue**. The median across your own affiliates is **2.44%.**



OPERATING SUPPLY AS A SHARE OF TOTAL REVENUE · 40 GOODWILL AFFILIATES THAT BREAK OUT THE LINE

The defence that does not hold

The obvious answer is that a donated-goods retailer buys supply the way a retailer does, so the ratio should be higher. That would be persuasive if the comparison were against charities. It is not.

Why it does not hold

The all-nonprofit median for this line is **2.40%**. The Goodwill affiliate median is **2.44%.** Running the identical model produces the identical ratio. The model does not move the number.

FILED Form 990 Part IX, FY2024, each affiliate's own return · **DERIVED** operating supply divided by total revenue, per filer.

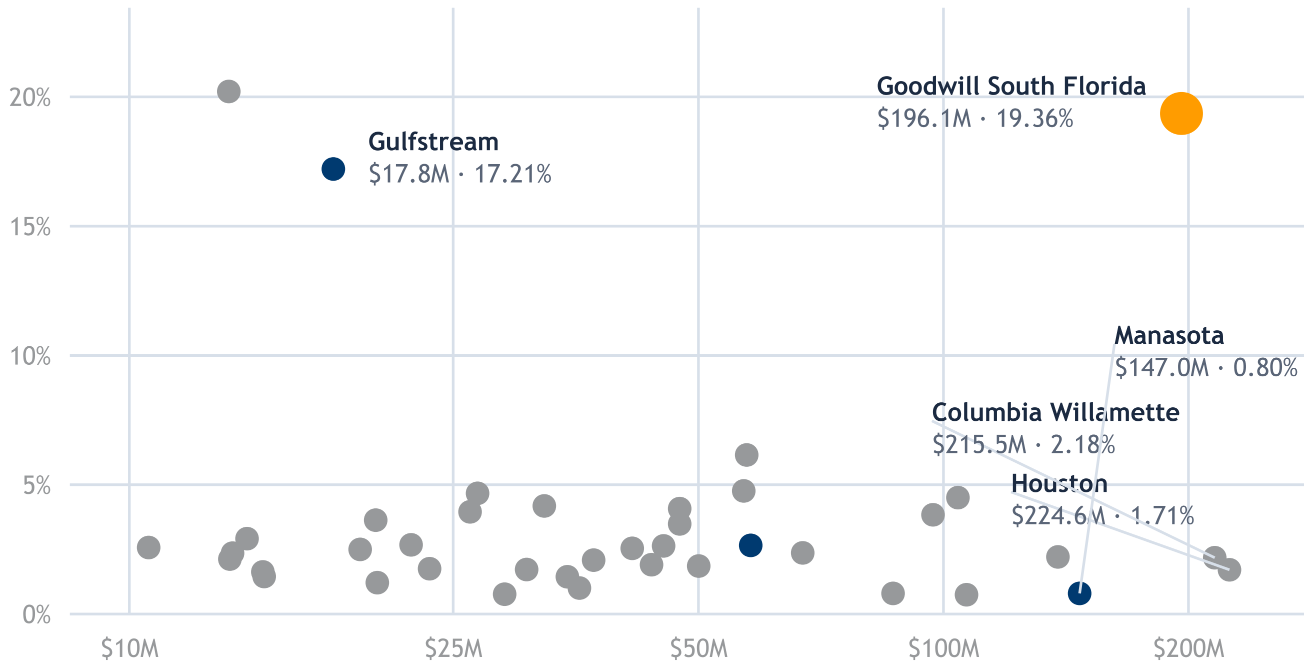
It is not scale, and it is not Florida.

Two explanations remain once the model is ruled out. Both are testable against the same forty filings, and both fail.

The two largest affiliates in this comparison spend less than a tenth of what you do.

OPERATING SUPPLY AS A SHARE OF REVENUE

FLORIDA AFFILIATES IN NAVY



TOTAL REVENUE · LOG SCALE

Not scale

Goodwill Industries of Houston is larger than you at $224.6M and sits at **1.71%**. Columbia Willamette is larger at $215.5M and sits at **2.18%**. Both run more revenue through the same model.

Not Florida

Four Florida affiliates break out the line and they split. Southwest Florida is at 2.66% and Manasota, at $147.0M, is at **0.80%** — among the lowest in the country.

FILED Form 990 Part IX, FY2024 · **DERIVED** arithmetic on filed figures only. No modelled or estimated value appears on this page.

So what is it?
We cannot answer that from outside.

A filing shows a position. It does not show a cause. Every explanation we can test from public data has now failed, and the ones that remain are internal. Three of them, specifically.

1 Is it accounting treatment? If purchased goods for resale sit in this line rather than in cost of goods, the ratio is a classification artefact and there is nothing to recover. That is a real and welcome answer, and it takes one conversation to establish.

2 Is it purchasing? If the line is genuinely consumable supply, then $37.97M is being bought somehow, and the question becomes what was last tested and against what.

3 Is it both? Most often it is. Part of the line reclassifies and part of it does not, and the part that does not is where the work is.

> We are not suggesting the number is wrong, and we are not suggesting anyone is overpaying. We are saying that your own peer set does not explain it, and that **the explanation is in your ledger rather than in ours.**

Your filing names five suppliers. Those suppliers file too.

Part VII Section B requires an organisation to name its five highest-paid independent contractors, describe what they do, and state what they were paid. Your filing names five. So do thousands of others.

NAMED CONTRACTOR	DESCRIBED AS	DISCLOSED	LOCATED
N&K ENTERPRISES	LAUNDRY DISTRIBUTION	$1,518,596	Coral Gables, FL
SOURCEAMERICA	CONSULTING SERVICES	$1,332,881	Vienna, VA
GALLAGHER BASSETT SERVICES INC	THIRD PARTY ADMINISTRATORS	$558,228	Chicago, IL
ADP INC	PAYROLL SERVICES	$476,232	Boston, MA
HAMMOQ INC	CONSULTING	$312,577	Phoenix, AZ

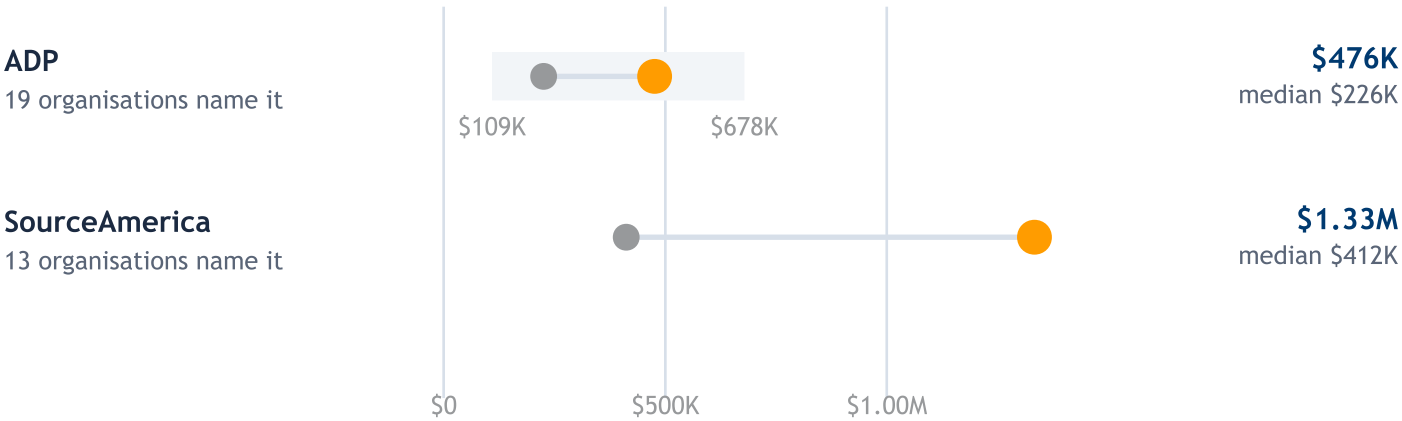
Across the public book we hold **18,482 named contracts** from **4,542 organisations**, totalling **$22.19 billion**. That is not a benchmark. It is what comparable organisations disclosed paying, under penalty of perjury, on a filed return.

FILED Form 990 Part VII Section B, FY2024 · **PUBLIC RECORD** contractor names and amounts as filed. Names are held on file and are not printed beyond your own.

Two of your five named suppliers appear in enough other filings to place.

SourceAmerica is paid **$1.33M** by you. The median across the thirteen organisations that name it is **$412K.**

WHAT OTHER ORGANISATIONS DISCLOSED PAYING THE SAME NAMED SUPPLIER



Disclosed amounts are annual totals, not rates, and organisation size and scope differ. This is a question to put to the arrangement, not a finding about it.

Why only two

Gallagher Bassett is named by one other organisation in the entire book. One comparator is not a distribution, so we do not draw one. N&K Enterprises and HAMMOQ appear nowhere else — that is normal for a regional supplier and is not a finding.

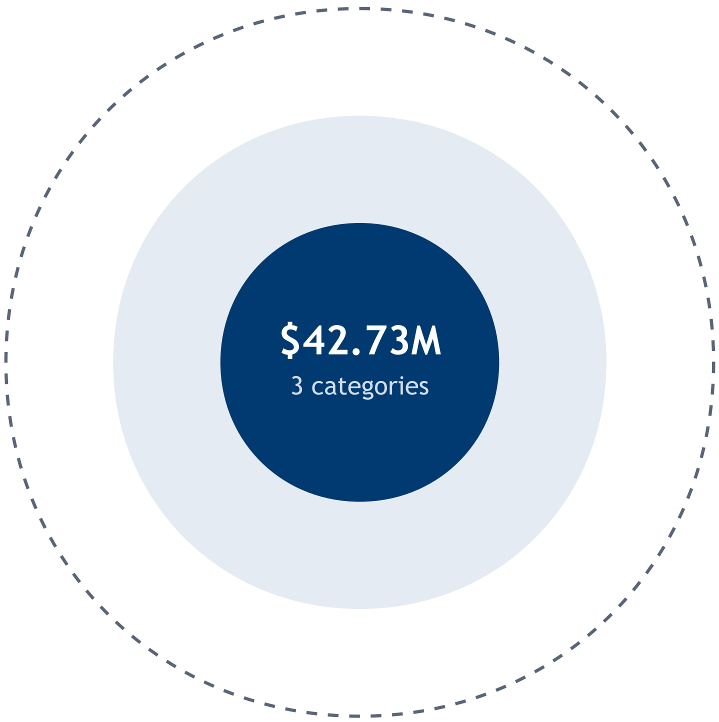
What this is worth

It is a question with a filed number attached, not a conclusion. Scope explains a great deal of variation in a services contract. It is the kind of question a specialist puts to an arrangement on day one, and it is the kind you cannot ask without this data.

FILED Form 990 Part VII Section B · **METHOD** exact-firm match; SourceAmerica is filed under three spellings and all three are included. **Amounts are annual totals, not rates.**

Your filing shows six categories. We work fifty-five.

Three categories carry completed ERA work behind them. Nine more are separated on your return but name no supplier.



$42.73M · 3 categories
Completed ERA work stands behind every one.

$39.03M · 9 more indirect lines
The filing separates them but names no supplier, so we size nothing.

The rest of the 55 categories ERA works
We do not know whether there is material spend here. Neither does your P&L. That is what we would find out.

We only quote a percentage where we have finished at least ten jobs in that category. Where we have fewer, we name the line and quote nothing. That rule is why the outer ring above carries no number.

We cannot size the outer ring from outside. You can. Waste, telecom, packaging, payment processing, utilities, maintenance and office supply rarely appear separately on a Form 990. We are not asserting there is spend there. We are saying neither of us knows yet, and that finding out is a week of work rather than a project.

Every indirect line on your return, and what we did with each one.

FILED LINE	AMOUNT	WHAT WE DID WITH IT
MATERIALS AND SUPPLIES (line 24)	$37,971,710	Modelled — completed ERA work in this category
Occupancy (line 16)	$24,376,137	Not an indirect vendor line, or blended — we do not size it
Fees for services — Other (line 11g)	$8,082,654	Not an indirect vendor line, or blended — we do not size it
FREIGHT AND POSTAGE (line 24)	$2,631,840	Modelled — completed ERA work in this category
SERVICE CHARGES (line 24)	$2,423,261	Not an indirect vendor line, or blended — we do not size it
FLEET AND TRANSPORTATION (line 24)	$2,122,533	Modelled — completed ERA work in this category
All other expenses (line 24e)	$1,502,571	Not an indirect vendor line, or blended — we do not size it
Office expenses (line 13)	$1,372,501	Named, not modelled — fewer than ten completed jobs in this category
Fees for services — Legal (line 11b)	$637,913	Named, not modelled — fewer than ten completed jobs in this category
Advertising and promotion (line 12)	$482,421	Named, not modelled — fewer than ten completed jobs in this category
Travel (line 17)	$449,863	Named, not modelled — fewer than ten completed jobs in this category
Fees for services — Lobbying (line 11d)	$63,200	Not an indirect vendor line, or blended — we do not size it

FILED Form 990 Part IX, FY2024. Occupancy and fees for services are blended lines that mix addressable and non-addressable elements; separating them needs your detail, not our assumption.

What a specialist does that a bid does not.

A bid tests price

It asks the market what it would charge for the thing you say you buy. It is useful, and it is where most reviews stop.

A specialist tests the arrangement

The contract underneath the spend. The minimums, the usage bands, the renewal mechanics, the ancillary charges, and what is actually being billed against them.

Why that matters here

A category can have been bid, renewed, brokered and reviewed and still carry terms nobody has looked at in years. That is not a failure of process. It is what a normal sourcing cycle is not designed to catch.

The depth behind it

Sixty-nine completed engagements in operating supply. Eighty-nine in small parcels. Thirteen in fleet. That is the evidence base, and it is why we quote in those three and nowhere else.

BENCHMARK completed ERA engagements per category, quartiles only · No published market band is used anywhere in this Brief.

A clue becomes verified value in six steps, and you approve every one.

Two of the six steps need anything from your team. The rest is ERA capacity.

YOU APPROVE EVERY STEP

The clue in the filing › A specialist reads it › One contract, one invoice export › Options, priced › Your decision › Implementation and verified value

The only two steps that cost you anything: one contract, one invoice export.
Everything after your decision is ERA capacity, not your team's time.

This is the part that is hard to see from a proposal. The analysis is not the product — implementation and measurement are. A recommendation that nobody has the time to carry out returns nothing.

Control stays with you.
The incumbent may be the right answer.

Nothing changes without your approval. You choose which categories advance, and which recommendations are implemented. We do not have authority we were not given.

Incumbents frequently remain. The objective is the right commercial outcome, not supplier churn. A validated arrangement is a real result and we will say so plainly.

Value can come from terms, structure, process or validation. Not only from replacing a supplier.

Our economics depend on yours. If we create no verified recovery, there is no fee. We are paid from value after you have received it.

The recovery model on your three evidenced categories, at the median of completed ERA work, is **$9.01M a year** against **$42.73M** of filed spend. That is the size of the question, not a promise, and it is drawn from 171 completed engagements rather than a published range.

Ninety minutes, and you will know whether any of this is real.

Who should be there

You, and whoever owns the general ledger. Nobody else is needed and nothing has to be prepared.

What happens

We put the affiliate comparison on the table and you tell us what is in the materials and supplies line. That single answer either closes the question or opens it.

What you leave with

A written read of where your position is explained by treatment and where it is not — whether or not you engage ERA. It is yours either way.

Why it is worth it regardless

If the line reclassifies, you have an independent confirmation of something you believed. If it does not, you have found $37.97M that nobody has tested.

> **Would you give us ninety minutes?** Your Brief is also live online — the code on the letter opens it. No code. No form. No login.

Is it how the line is recorded, or how it is bought?

Every explanation we could test from public filings has failed. Your own peer set does not explain the position, scale does not explain it, and neither does the state you operate in.

What remains is a question only your ledger can answer — and answering it costs one conversation.
