PREPARED EXCLUSIVELY FOR

Carmel Country Club

June 30, 2026

EXECUTIVE OPPORTUNITY SNAPSHOT · PRIVATE MEMBER CLUB

Your next capital project may already be hiding in your operating budget.

The opportunities most clubs miss are not the ones anyone is hiding. They are the recurring, unglamorous line items leadership assumes are already handled — the costs no single person owns, behind a market almost no one re-tests. At a club of this size, the drift in those categories compounds quietly, year over year, and rarely surfaces in anything the board reviews.

WHAT THIS OPPORTUNITY REPRESENTS

22–50

full golf memberships in equivalent annual dues, without adding a member

≈ $610K – $1.37M in estimated annual recovery · sized in the analysis that follows

≈ $3.05M – $6.85M toward capital projects over five years, with no new member assessment

WHY THE FIGURE IS CREDIBLE

1. Built from Carmel Country Club's own public financial filings and ERA's benchmark database — $2.25B of spend reviewed across 6,420 completed engagements at 916 organizations.
2. Validation is a no-cost, 30-day baseline. Incumbent suppliers typically stay — more than 90% are retained — so operations, service, and vendor relationships remain in place.
3. The engagement is contingency-based: a share of verified savings only — no savings, no fee, and no upfront cost.

The three pages that follow summarize a preliminary, outside-in analysis already completed on Carmel Country Club — before any meeting, using public filings and ERA's category benchmarks. The remaining step is to validate those observations against information available only inside the organization.

Our outside-in analysis points to an opportunity comparable to those identified across similar organizations. The remaining question is whether the same conditions exist within Carmel Country Club.
