What this is, why we prepared it, and what it does not claim.

One page of orientation before any numbers. We built this from your public filings before contacting you, because a useful conversation should begin with evidence rather than a capability presentation.

MEDIAN OUTCOME, OUR COMPLETED WORK

$8.7M

a year — $5.5M on our weakest quartile

Not a published range. This is the **median outcome across 158 completed ERA engagements** in your own categories, applied to the $43.7M your filing names. Of 2,660 engagements overall, **2,649 recovered value** — and the weakest quarter still returned 14%.

How it was built

Your public filing. Nineteen expense lines; seven map to categories we work.

A peer comparison. Each category against every nonprofit filer that breaks it out separately.

Our own completed work. What ERA has recovered in those categories — not a projection.

Reading the position

Above the median is a question, not a verdict. Your model is one reason a category sits high.

At or below it is not proof of competitive buying — the median is drawn from organizations that have mostly never tested either.

What follows

What we looked at, and what we did not

$40.6M

MODELLED

Operating supply and freight. **158 completed engagements** stand behind the figure above.

$3.1M

TO BE QUANTIFIED

Fleet, marketing, travel. We work all three — too few engagements to quote a median. **Upside.**

$38.5M

NEEDS YOUR DETAIL

Mostly occupancy. We work everything in it but the rent, and a 990 reports them as one figure. **Upside.**

ERA works **55 categories**. Your filing reports **12 lines of indirect spend**, $82.1M in total, and all twelve are above. The $8.7M comes from the first card only.
