

## EXECUTIVE OPPORTUNITY SNAPSHOT · REGIONAL HEALTH SYSTEM

# Your next clinical hire may already be hiding in your operating budget.

The opportunities most organizations miss are not the ones anyone is hiding. They are the recurring, unglamorous line items leadership assumes are already handled — the costs no single person owns, behind a market almost no one re-tests. At an organization this size, the drift compounds quietly, year over year — dollars that could fund care, staffing, or reinvestment instead leaking out through contracts no one re-tests.

## WHAT THIS OPPORTUNITY REPRESENTS

## 12–28

**full-time nurses funded for a year, without adding to the clinical budget**

≈ \$1.2M – \$2.8M in estimated annual recovery · sized in the analysis that follows

**≈ \$6M – \$14M** toward staffing and capital over five years

## WHY THE FIGURE IS CREDIBLE

- 1 Built from Catawba Regional Health's own public financial filings and ERA's benchmark database — \$2.25B of spend reviewed across 6,420 completed engagements at 916 organizations.
- 2 Validation is a no-cost, 30-day baseline. Incumbent suppliers typically stay — more than 90% are retained — so operations, service, and vendor relationships remain in place.
- 3 The engagement is contingency-based: a share of verified savings only — no savings, no fee, and no upfront cost.

The three pages that follow summarize a preliminary, outside-in analysis already completed on Catawba Regional Health — before any meeting, using public filings and ERA's category benchmarks. The remaining step is to validate those observations against information available only inside the organization.

**Our outside-in analysis points to an opportunity comparable to those identified across similar organizations. The remaining question is whether the same conditions exist within Catawba Regional Health.**
