

\$2.07M of indirect spend sits inside a \$9.08M expense base.

Your filing names six categories of it. ERA works 55.

Compensation, depreciation and grants make up the rest of your expenses and are not ours to work. What follows compares the indirect categories your Form 990 names separately against organizations of comparable size and type — a starting point for a question, never a verdict on how you are run.

\$2.07M

INDIRECT SPEND, AS FILED

23% of total expenses. The remainder is compensation, depreciation and grants — not indirect.

\$1.62M

NAMED BY CATEGORY

Six categories. A further \$449K sits in lines the filing does not name.

55

CATEGORIES ERA WORKS

Most never appear separately on a 990 at all. The baseline covers every one that applies to you.

1

PRIORITY THE PUBLIC RECORD CAN ALREADY EVIDENCE

Insurance, on two independent layers. The rest of the case is built inside.

Evidence depth: four of nine layers carry something for this organization — filed, benchmark, derived and registry. Operating, retrieved, engagement and verified are empty, and are shown as empty rather than filled.

Where each category sits

CATEGORY	FILED	YOUR % OF REVENUE	PEER MEDIAN	PEERS	POSITION
Insurance	\$1.05M	6.67%	1.04%	10,953	Well above · 99th
Maintenance	\$264K	1.69%	1.00%	4,831	Above · 67th
Travel	\$105K	0.67%	0.37%	8,769	Above · 65th
Utilities	\$167K	1.06%	1.86%	434	Below · 26th
SaaS / Software	\$16K	0.10%	0.36%	1,155	Well below · 17th
Office Supplies	\$23K	—	—	—	Not yet compared

Each category is compared against every nonprofit filer that breaks that category out separately, measured the same way — category spend as a share of total revenue. Cohort sizes differ because not every organization discloses every line, and a category needs at least 30 filers before we will state a position. The categories a filing does not break out are sized in the baseline, not here.

Why insurance, and not simply because it is largest

It sits at the **99th percentile of 10,953 filers** — six times the peer median as a share of revenue. It is also the one category where a second filing shows something a Form 990 cannot: your plan's Schedule A discloses **\$526K** of intermediary compensation across two relationships, covering 581 people. Two independent layers on one category is what earns it a page.

Where the filing looks competitive

Utilities sits at the 26th percentile and software at the 17th — both below the peer median as a share of revenue. On the public record these already look well bought, so they are not where this Report points first. A baseline covers every applicable category and would confirm it either way, which is worth knowing in its own right.
