

Forty Goodwill affiliates break out this line.
Thirty-nine spend less than you.

Operating supply is **19.36%** of your total revenue. The median across your own affiliates is **2.44%**.

The defence that does not hold

The obvious answer is that a donated-goods retailer buys supply the way a retailer does, so the ratio should be higher. That would be persuasive if the comparison were against charities. It is not.

Why it does not hold

The all-nonprofit median for this line is **2.40%**. The Goodwill affiliate median is **2.44%**. Running the identical model produces the identical ratio. The model does not move the number.

FILED Form 990 Part IX, FY2024, each affiliate's own return · **DERIVED** operating supply divided by total revenue, per filer.
